

Television

Television was invented by the ~~ancient~~ scientist J. L. Baird. It is the first electronic appliance that can be used to watch movies, videos, TV shows, and much more. Children prefer to view the TV all the time because of the many entertaining cartoons they show us. The earlier models of the TV were bulky and needed to be placed on a strong and sturdy table.

The newer models are flat and require very little space for storage. This is an excellent feature as we can even mount the TV on the wall to watch our programs in a better way.
