2.2

- 1) Recent data have suggested that the approximate number of dispensaries that had taken place in India as well as many other parts.

The scenario was entirely different in the year 1951. During that period, the total number accounted to about 9209 only.

Therefore the percentage calculation is as follows:

$$(29,957 - 9209 / 29,957) \times 100\% =$$

69.25% increase in the total number of dispensaries, on an approximate basis

Yes, classification of economic activities into primary, secondary and tertiary sector is useful as it helps in estimating the relative importance in the growth in GDP of the economy. ~~at~~ Classified in such a way helps in calculating how much goods and services are produced and how many people work in each sector.
