

HOME ASSIGNMENT

Q1) Male or female Reproductive cells are called gametes. Sexual Reproduction happens when male and female gametes fuse with each other to form zygote.

Q3) Primary sexual parts:

- * Primary sexual parts are gametes.
- * They produce sexual hormones: testosterone in males and estrogen and progesterone in females. Eg. Testis and ovaries.

Secondary Sexual Parts:

- * Secondary sexual parts do not produce gametes but they

transmit and nourish gametes.

* They do not secrete hormones.

* Example: uterus, seminal vesicles.
