

Geography Home worksheet

1. a erosion

b Angel Falls, South America

c ~~South~~ weathering and erosion.

d Distributaries

e River valley

2. a

1) Process of eroding or being eroded by wind water or any other natural agents is called erosion. For example sand gets eroded by a river.

2) A river delta is a landform created by deposition of sediments that is carried by a river. It slows the leaves its mouth and ~~enters~~ enters the sea.

3) Flood plains are formed due to

→ Erosion.

→ Deposition.

U shape bends in a river or curved

bends in a river that are cut off from

the main river are called oxbow lakes

The flood plain is very fertile because.

The plain is located very close to a

river

It gets supply of river sediment

A stream that flows away from the main

stream channel is called a distributary

The process that breaks down rocks into

smaller pieces is called weathering.
