

Rivers

A river is naturally flowing

water body. It contains fresh

water. It flows towards ocean

or seas. Rivers generally flow

through mountains hills etc.

Rivers contains only 0.0001% of

fresh water on Earth. Water in

the rivers comes through various

resources. fast flowing rivers

can be good source of energy.

Rivers are important for our

life. Rivers provide many useful things to us. Ganga is the longest river of India. A river with low slope and containing a large number of tributaries is 'old river' and the water level inside it is very large. A river with some slope which gets raised due to tectonic uplift is the 'rejuvenated river'. ~~It~~

Rivers are the best place of tourism like
river rafting boating cruise ship travelling.
