Tiger

The tiger is the national animal of India. It is known as the largest animal in the cat family. They are largely found in Asia. It is a proud and fierce animal. It has a big and strong body. The tigers are carnivorous animals. Tigers live in forests and woods. The tigers are generally yellow in colour with black stripes all over them. It is found in white colour also. It has very sharp teeth to tear flesh. It has very piercing eyes which can see very well even in the night. It has padded feet and sharp claws. The claws and paws of a tiger are extremely powerful. It runs very fast and can chase its prey for miles without getting tired. It usually hunts animal such as deer, wild buffaloes, baby elephants etc. It mostly attacks suddenly on its prey. It can climb on trees and is also one of the best swimmers among animals.

Tigers are called as lord of jungle as they symbolize the wildlife wealth of the country. Their numbers are decreasing slowly due to poaching and loss of habitat. We must try to save this royal animal at all cost.
