

## Homework

1) Write two differences between blood & lymph.

### Blood

- > It is red in colour due to the presence of haemoglobin red cells.
- > It moves away from the heart & towards the heart.

### Lymph

- > It is colourless as red blood cells are absent.
- > It moves in one direction i.e., from tissues to subdavian.

2) How bone differs from Cartilage?

### Bone

- > Bone is a hard connective tissue.
- > Bone is highly vascular.
- > Bone may have bone marrow at the centre.

### Cartilage

- > Cartilage is soft connective tissue.
- > Cartilage is non vascular.
- > No such tissue is present.

(3) What is the <sup>main</sup> function of muscle tissue?

Ans - The main function of muscle tissue is that it's responsible for the movement in our body.
