

Q) Define Tissues

A group of cells that are similar in structure and/or work together to achieve a particular function forms a tissue.

Q) Why animal & plants have different types of tissues?

Plants consist of living as well as dead tissues. Hence they contains living tissues in order to provide energy for movement. Also, both animals and plants perform different function. So, to suit to the varied functions they are made up of different kinds of tissues.

Q) Draw a well labelled diagram of Meristematic tissue.

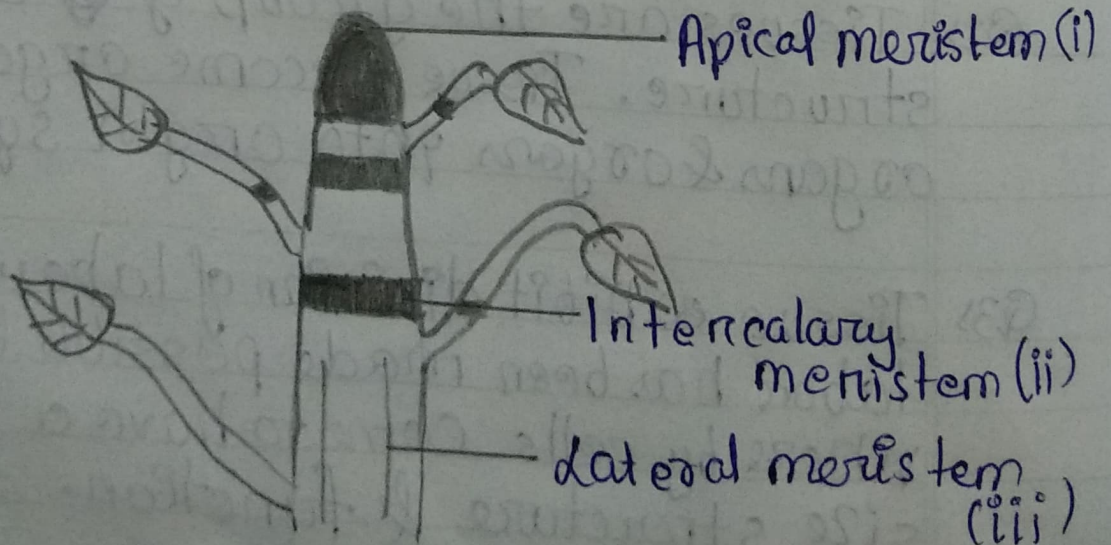

Fig. Various Meristematic Tissue
