

Why should we use CFL bulbs and tubelights?

Ans → CFL bulbs → CFL bulbs last longer and therefore we will save our time and money in the long run. CFL's use 25-35% less energy than traditional light bulbs.

Tubelight → Tubelight make about 75% less heat compared to an incandescent bulb because they are not using resistance to emit light. That also results in an energy saving, and also helps to keep whatever room they are in at a cooler temperature.
