

Adaptation of Camels

Camels are well adapted for survival. They have padded, big and wide feet to protect themselves from the heat and stop them slipping in the sand.

They have thick fur on the top of the body for shade.

They have well sense organs and a nervous system to feel the changes in their surroundings.

Adaptation of polar bears

Polar bears live in cold regions

They have fur on their bodies to keep them warm. They have fat under the skin to be used as food in winter
