Q. The Earth is rotating, why ~~do~~ do we not feel this movement?

Ans) Earth ~~is rotating~~ ~~no~~ move very fast. It spins (rotates) at a speed of about 1000 miles (1600 kilometers) per hour and orbits around the sun at a speed of about 67000 miles (107,000 kilometers) per hours. We do not feel any of this motions because these speeds are constants.
