

1) Should we waste water? Why or why not?

[State the reason in your notebook]

Ans:-

The surface of the earth, there are 71% water. Believe it or not, while 71% of our earth is covered in water, only 3% of only 1% water is fresh water. Out of 3% only 1% is available and the remaining 2% being locked in glaciers and ice caps.

- Fresh water is not a renewable resource.
- We need water to survive but we have to protect it. Otherwisk we face many difficulty.
- Water conservation is the way to reduce the use of water.

So, we shouldn't waste water.

Water conservation starts at home. By adapting small practices to reduce water consumptions we are able to create a big impact in our environment.
