

Exercise 12.1

1) Perimeter = 180 cm

length of the side = $\frac{180}{3}$ cm (cuz it is equilateral triangle)

= ~~180~~ 60 cm

~~Area~~ semi Perimeter = $\frac{180}{2}$

= 90 cm

Area = $\sqrt{90(90-60)(90-60)(90-60)}$ cm²

= $\sqrt{90 \times 30 \times 30 \times 30}$ cm²

= $\sqrt{2430000}$ cm²

⇒ $900\sqrt{3}$ cm²

2) The sides of the triangle ABC are 122 m, 22 m and 120 m.

$$\begin{aligned}\text{Perimeter of the triangle} &= 122 + 22 + 120 \text{ m} \\ &= 264 \text{ m}\end{aligned}$$

$$\text{Semi perimeter} = \frac{264}{2} \text{ m}$$

$$= 132 \text{ m}$$

$$\begin{aligned}\text{Area of triangle} &= \sqrt{s(s-a)(s-b)(s-c)} \\ &= \sqrt{132(132-122)(132-22)(132-120)} \text{ m}^2 \\ &= \sqrt{132 \times 10 \times 110 \times 12} \text{ m}^2 = \sqrt{1742400} \text{ m}^2\end{aligned}$$

The cost of the 1320 m^2 of the wall for
advertising for 3 months = $\frac{1320 \times 5000 \times 3}{12} = \frac{1320 \times 1245}{1}$
 $= ₹ 1650000$

3) The side of the wall are 15 m , 11 m and 6 m
The Perimeter = $15 + 11 + 6 \text{ m}$
 $= 32 \text{ m}$

The Semi Perimeter = $\frac{32}{2}$

$$= 16 \text{ m}$$

The area that is painted = $\sqrt{s(s-a)(s-b)(s-c)} \text{ m}^2$
 $= \sqrt{16(16-15)(16-11)(16-6)} \text{ m}^2$
 $= \sqrt{16 \times 1 \times 5 \times 10} \text{ m}^2$
 $= \sqrt{800} \text{ m}^2$
 $= 20\sqrt{2} \text{ m}^2$

4) The sides of the triangle are 18 cm, 10 cm and third side is unknown x .

So,

$$\text{Perimeter of the triangle} = 42 \text{ cm}$$

So,

$$\text{The length of the 3rd side} = 18 + 10 + x = 42 \text{ cm}$$

$$\Rightarrow x = 42 - 28 \text{ cm}$$

$$\Rightarrow x = 14 \text{ cm}$$

Hence,

$$\text{The semi Perimeter of the triangle} = \frac{42}{2} \text{ cm}$$

$$= 21 \text{ cm}$$

$$\text{Area of the triangle} = \sqrt{s(s-a)(s-b)(s-c)} \text{ cm}^2$$

$$= \sqrt{21(21-18)(21-10)(21-14)} \text{ cm}^2$$

$$= \sqrt{21 \times 3 \times 11 \times 7} \text{ cm}^2$$

$$= \sqrt{4851} \text{ cm}^2$$

$$= 21\sqrt{11} \text{ cm}^2$$

5) The sides of the triangle are in the ratio of 12:17:25 and its perimeter is 540 cm. So, let the sides be $12x$, $17x$ and $25x$.

$$\text{The length of the sides} = 12x + 17x + 25x = 540 \text{ cm}$$

$$\Rightarrow 54x = 540 \text{ cm} \Rightarrow x = \frac{540}{54} \text{ cm} \Rightarrow x = 10 \text{ cm}$$

Hence, $12x = 12 \times 10 = 120 \text{ cm}$, $17x = 17 \times 10 = 170 \text{ cm}$ & $25x = 25 \times 10 = 250 \text{ cm}$

$$\text{Semi Perimeter of the triangle} = \frac{540}{2} \text{ cm}$$

$$= 270 \text{ cm}$$

$$\begin{aligned} \text{Area of the triangle} &= \sqrt{s(s-a)(s-b)(s-c)} \text{ cm}^2 \\ &= \sqrt{270(270-250)(270-170)(270-120)} \text{ cm}^2 \\ &= \sqrt{270 \times 20 \times 100 \times 150} \text{ cm}^2 \\ &= \sqrt{81000000} \text{ cm}^2 \\ &= 9000 \text{ cm}^2 \end{aligned}$$

6) The sides of an isosceles triangle are 12 cm, 12 cm and the third side is unknown so x . The Perimeter of the triangle is 30 cm.

Hence,

$$\begin{aligned} \text{The length of 3}^{\text{rd}} \text{ side} &= 30 - (12 + 12) \text{ cm} \\ &= 6 \text{ cm} \end{aligned}$$

$$\text{Semi Perimeter of the triangle} = \frac{30}{2} \text{ cm}$$

$$= 15 \text{ cm}$$

$$\begin{aligned} \text{Area of the triangle} &= \sqrt{s(s-a)(s-b)(s-c)} \text{ cm}^2 \\ &= \sqrt{15(15-12)(15-12)(15-6)} \text{ cm}^2 \\ &= \sqrt{15 \times 3 \times 3 \times 9} \text{ cm}^2 \\ &= \sqrt{1215} \text{ cm}^2 \\ &= 9\sqrt{15} \text{ cm}^2 \end{aligned}$$
