

HW

HOMEWORK

1)	Elements	Compounds
→	Pure substances which are composed of 1 type of atoms	when 2 or more elements chemically combine with each other they are compounds
→	The representation of an element takes place by using symbol	The representation of a compound is using a chemical formula.
→	$O_2$ , $H$ , $Cl$	→ $NaCl$ , $H_2O$

2)  $H_2$ ,  $O_2$  are made up of same kind of atom hence these are elements.

But  $H_2O$  is made by combination of different kinds of atoms such as  $H_2$ , and  $O_2$ , so called a compound.
