## Revision-1

- 1) Assembler converts Assembly language to Machine language.
- 2) Low level languages are machine dependent language.
- 3) High level languages are machine independent language.
- 4) Java is the example of high level language.
- 5) Interpreter and compiler are two translator program for high level language.
- 6) The term software was first by John W. Turkey in 1957.
- 7) Fourth generation languages were designed to reduce the level of programming efforts.
- 8) To create a blank desktop press Windows key + Ctrl + D.
- 9) The name of searching tool in Windows 10 is Cortana.
- 10) Microsoft Edge is the name of windows 10 browser.

- 10) Quick Access Button helps to perform action such as adjusting screen brightness, turning Bluetooth on/off, etc.
- 11) Windows Hello is the Microsoft's new built-in biometric system for windows 10.
- 12) RIP means copying data from CD to computer.
- 13) You can copy songs from your computer with Windows Media Player.
- 14) Burning a CD means copying data from computer to CD.
- 15) MPEG1 stands for Moving Picture Experts Group.
- 16) Stop Recorder is trouble shooting a problem occurring in Windows 10.
- 17) Replacing double click with single click is available under File Explorer option of control panel.
- 18) Utilities are the additional programs of Windows.
- 19) Source
- 20) Object program converted into machine language by the translator.

20) A program is a set of instructions which tells the computer what to do.

22) The development of computer languages can be classified into 2 categories.

23) Binary Language consists of <sup>binary numbers i.e.</sup> computer - 0 and 1.

24) Compiler convert the high level language to machine language whole at a time.

25) High-level languages uses simple English words and Mathematics operations.

26) Assembly languages uses mnemonic codes or symbols.

27) Syntax are the rules governing the formation of statements in programming language.

28) In binary languages, 0 means OFF and 1 means ON state.

29) A program written in the assembly language is called Source program.

30) Interpreter converts a high level language program into machine languages, line by line.
