

AUTUMN

Autumn is one of four major seasons in a year. Autumn changes the season from summer to winter because it falls between them.

Autumn falls at different time in different part of the earth. In our country, this season falls from the month of September to November. Every season has its own features. Autumn is also known as 'fall' because the leaves from the trees start falling in Autumn. Due to lack of rain, leaves starts drying up and then they fall ~~at~~ and the new leaves come up in winter.
