

## Indian Rivers

The rivers of India play a major role in the lives of people including transport, water source, electricity, tourism and also have some religious aspects.

~~These~~ There are seven major rivers along with their tributaries which form our river system, with the largest one draining its water into the Bay of Bengal. Some of well-known river systems are like Ganga system, Brahmaputra system and Indus river system. Examples of the famous rivers of India are - Krishna, Godavari, Mahanadi, Narmada and many more.
