

HW
7.9.21

Q. A bat and a bird can fly, yet they are different from each other. How?

Ans- A bat and a bird can fly, yet they are different from each other. Because,

→ Birds are oviparous as they reproduce by laying eggs ~~where~~ whereas bats are viviparous as they reproduce by giving birth to their young ones.

→ Birds have beak and no teeth whereas bats have jaw bones with sharp teeth.

→ Birds are flying at day whereas bats are flying at night.
