Q. The Earth is rotating, why do we do not ~~feel~~ feel this movement?

Ans- → The Earth is rotating ^{along} its axis steadily and moves at a constant rate in orbit around the sun.

→ We are also moving with the earth at the same speed hence we do not ~~feel~~ feel that the earth is rotating.

Example - when moving in a plane we don't ~~feel~~ feel the movement because the plane moves at a smooth speed and we are moving at the ~~equal~~ equal rate with the plane.
