

HOME ASSIGNMENT

1) How environment is getting polluted?

Ans: Environmental pollution is not a new phenomenon, yet it remains the world's great problem facing humanity, and the leading environmental cause. Increasing human activity has led to environmental degradation through deforestation, pollution, etc. Man's activities through urbanization, industrialization, mining and exploration are at the forefront of global environmental pollution. Humans either adapt to their natural environment or modify the environment to suit their needs.

2) How environment pollution affecting us?

Ans: Environmental hazards increase the risk of cancer, heart disease, asthma, and many other illnesses. These hazards can be physical, such as pollution, toxic chemicals, and food contaminants, or they can be social, such as dangerous work, poor housing conditions, and poverty (malnutrition, hunger and starvation), air pollution, water pollution, land pollution and noise pollution.

3) How to reduce environment pollution?

Ans: The first way to reduce pollution is to practice the 3R's concept namely reduce, reuse and ~~recycle~~ recycle. Citizens should reduce the usage of air-conditioners as it will release harmful gases, for instant ozone-depleting chlorofluorocarbons which will result in reducing air pollution.

4) What is your suggestion to reduce environment pollution?

Ans: Reduce the number of trips you take in your car. Reduce or eliminate fireplace and wood stove use. Avoid burning leaves, trash and other materials. Avoid using gas-powered lawn and garden equipment.

5) Do environment pollution affects our daily life? How?

Ans: People experience a wide range of health effects from being exposed to air pollution. Long-term health effects from air pollution include heart disease, lung cancer, and respiratory diseases such as emphysema. Pollution can also cause long-term damage to people's nerves, brain, kidneys, liver and other organs.
