

HW- Q. The Earth is rotating, why do we not feel this movement?

Ans - The Earth is rotating at a thousand miles & hour or orbiting the Sun at 67,000 miles & hours. We are <sup>always</sup> <sup>moving</sup> not aware of the speed we have been <sup>at</sup> that speed. The Earth never change its speed, its only we can feel the movement when the speed changes.  
For Ex -

When we drive a car on the road at a constant speed we don't feel the movement. We feel stationary in the sit of the car. When we change our speed or accelerate or the ~~brake~~ breaks then we sudden become aware of the fact that we are moving.
