12.5.24

1/ What is reproduction? why it is important?

Ans, The process of producing by which all living organisms produce individuals of their own kind for survival is called reproduction. Reproduction is important because if an organism will not reproduce of its own kind then the species will come to an end and no life will succeed on Earth.

2/ Write 2 differences between asexual reproduction and vegetative propagation.

Ans, Asexual reproduction | vegetative propagation

~~★ No meiosis fertilization takes place and the~~

★ Asexual reproduction only take place in unicellular or in bacteria.

★ vegetative propagation only take place in the vegetative part of a plant. ~~that can't~~

~~★ Ex - by reproduction~~
★ Ex - reproduction by stem.

★ Ex - binary fission
