Autumn season

Date _____
Page _____

There are six seasons in a year. Autumn season is one of them. It comes between September and October. Autumn season comes after summer and before winter. Autumn season follows rain. It's neither hot nor cold. In many places, the leaves of the trees turn yellow and golden in colour as they dry up. In this season, birds start to store food in their nests. In this season, we all see the natural beauty and happiness which is spreader in environment. We feel soothing and relaxing. No season can replace the gifted beauty of the autumn season. The children have much fun in autumn. In this season, we smell the fragrance of pumpkins. Flavours are found everywhere such as pumpkin bread, pie, coffee. This season gives us a lot of excitement, pleasure and happiness. That's why I like summer season very much.
