

HW

(1) What is the role of CSF?

- Cerebrospinal fluid has three main functions
- Protect brain and spinal cord from trauma
- Supply nutrients to nervous system tissue.
- Remove waste products from cerebral metabolism.

(2) How would you differentiate between myelinated and non myelinated neurons?

Myelinated nerve fibre is a nerve fibre with a myelin sheath

Non myelinated nerve fibre is a nerve fibre without myelin sheath

Myelinated nerve fibre is also referred to as myelinated nerve fibre. Non myelinated nerve fibre is also referred to as unmyelinated nerve fibre.

What is a synapse? How does it happen

The synapse is that small pocket of space between two cells where they can pass message to communicate. A single neuron may contain thousands of synapses.
