

"A world without oil"

We can not think of a world without oil today.

The main reasons are as follow:-

1. We can not run our vehicles without petrol or diesel which are produced from oil.
2. We can not use aeroplanes without aviation fuel, which is also produced from oil.
3. People mostly use kerosene that is used to burn lamps in villages. This is also produced from oil.
4. Now a days we use LPG for cooking, which is also produced from oil.
