H.W

What are the effects of force

- 1) Force can change the shape,
- 2) the motion
- 3) the length.

4) can stop a moving object.

5) Force can make something to break or stretch.

Differentiate between contact and non-contact forces.

Ans) Contact forces are force with contact - muscular force

Non-contact force are in non-contact magnetic force.

Normal force means muscular force.

mass - The amount of molecules in something.

weight - force.

Rolling friction means less than sliding friction like road roller.
