

Ch-3
(Force)

(13) What do you understand by the term friction?

A) Friction is that force which opposes the relative motion between the two ~~surfaces~~ surfaces that are in contact with each other.

(14) Give an example to illustrate the existence of force of friction.

(A) If we stop pedalling our bicycle, it gradually slows down and ~~at~~ ultimately it stops after travelling a certain distance. This is due to frictional force between bicycle and ground.
