

Light is a form of energy that affects our eyes to produce the sensation of vision.

LUMINOUS OBJECTS

- These objects emit light of their own
- We get to see luminous objects because their light enters our eyes directly
- Example of living luminous object:

Glow-worms

NON-LUMINOUS OBJECTS

- These objects do not emit light of their own
- We get to see non-luminous objects because its reflected from them and enters our eyes
- Example of living non-luminous object
