H.W

1.) The area drained ~~waters~~ by a single river system is called a drainage

2.) A river along with its tributaries may be called as river system. Any elevated area such as a mountain or an upland separates two drainage basins. Such an upland is known as a water divide

3.) Himalayan Rivers Peninsular Rivers

-> Originates from the Himalayan mountains

-> Originates from the Peninsular Plateau.

-> Most of them are Perennials.

-> Large number of them are seasonal

-> Depends upon rainfall and melting of glaciers from the lofty

-> Flow is dependent upon rainfall. In dry season even large rivers

mountains for their
waters.

have reduced water
flow in their
channels.

-> long courses from
their source to
the sea.

=> Shorter and
shallower courses
from their sources
to the sea.
