Write some of the adaptations of a camel and a polar bear

Camel

Camels are well adapted for ~~survival~~ survival - as camouflaged in desert. Their adaptations include:

- large flat feet - to spread their weight on the sand.
- thick fur on the top of the body for shade and thin fur elsewhere to allow easy heat loss.

Polar bear

- A white appearance from prey on the snow and ice.
- thick layers of fat and fur - for insulation against the cold.
- a small surface area to volume ratio - to minimize heat loss.
- a greasy coat that sheds water after swimming - to help reduce heat loss.
