★ Why icebergs are dangerous for ships?

Ans- Icebergs are dangerous for ships because, they are much more larger than they seems. When an iceberg floats on water, most of it remains under water and the captain of ship is not aware about the icebergs. As a result, it leads to accident.

• Most people live in the south of greenland than in the north. What do you think this is so?

Ans- As, the south-western coast of Greenland is the warmest part in Greenland because the northern part of Greenland is every cold and there is ~~not~~ no coast near it. So, most people live in the south of Greenland than in the north.
