## Ch-2 (Worksheet)

Q) What do you mean by errors of parallax

Ans) The different readings when the eye is kept at different positions. This is called the error of parallax. To avoid it, the correct readings ~~is obt~~

Q) Explain stepwise how to take measurement of length of an object with a meter scale.

Ans) To measure the length of an object using meter scale we should place the m scale along the object such that the zero mark of the meter scale coincides with one end of the object. Then the reading on the other end of the scale will give us the length of the object.
