Qts : Think and answer

2) More people live in the south of Greenland than in the north. Why do you think this is so?

Ans:

The northern part of Greenland is nearer to the north pole ~~the~~ ice falls there and it remains throughout the year. The permafrost are also found there. The permafrost never melt. It receives very ~~big~~ little sunlight in the summer months whereas the southern part of Greenland receives more sunlight and has little vegetation. It is little bit warmer in the southern part of Greenland ~~than in northern part~~. ~~more~~ that's why more people live in the south of Greenland than in north.
