

H.W

- Write some of the adaptations of a camel and a polar bear.

Polar Bears

Ans- Polar bears have ~~fat~~ on their body to keep them warm in cold regions. They have fat under their skin to be used as food in winter.

Camel

A camel has thick skin with less hair on it. It protects the camel from scorching heat of the desert sun. It has a hump which stores fat and can be used as food when the food is scarce.
