Q- Should we waste water? Why or Why not?

ans- We shouldn't waste water because water is essential to agriculture, using less water can greatly affect the availability of this essential commodity for growing food crops. About 97 percent of the Earth's water is salty water, which is not suitable for drinking. The small portion of water is available for drinking. ~~Therefore~~ Therefore we shouldn't waste drinking water. Water is used to generate electricity. It's also used in factories to produce various eatables. Hence

water is life and should not be  
wasted.
