

Homework

1. What do you mean by control and coordination?

Ans- Many life processes, like digestion, Respiration, excretion; etc. going on in our body. These processes do not function independently but they are interrelated. They also depend upon the general needs of the body. The interlinking of these activities of a living being as per the needs of the body internally ~~or~~ or externally is called coordination.

2. How nervous and endocrine system control and coordinates our body system?

Ans- Most of the time the endocrine and nervous systems work together to maintain homeostasis within the body.
