

Q A bat can fly but a bird
 can fly, yet they are ~~diff~~
 different from each other.
 How?

Ans - A bat and a bird fly but
 they are different from
 each other because that a
 bat have fingers on wings
 and a bird have a finger at end
 of wing as bat have fin more
 finger than bird so it ~~can~~ gives
 a better range of motion and
 also, their wings are curve and shape constantly
 as animal flies.
