Force

Camlin	Page
Date	/ /

Q. Define Force.

ans → The Push or Pull applied on an object is called force and the strength or energy as an attribute of physical action or movement is called force.

Q. Give an example of force as push or pull

ans → 1. To open a door, we push it.
2. To move a pile of rubbish, it is pushed by a broom.

Q. Explain force as stretch with the help of an example.

ans → ~~Wk~~ Elastic materials, and objects such as springs, change shape when a force is exerted on them; stretching happens when the material or object is pulled. compression happens when the material or object is squashed.
