

20.06.21

Homework :-

① Define tissues ?

Ans:
m

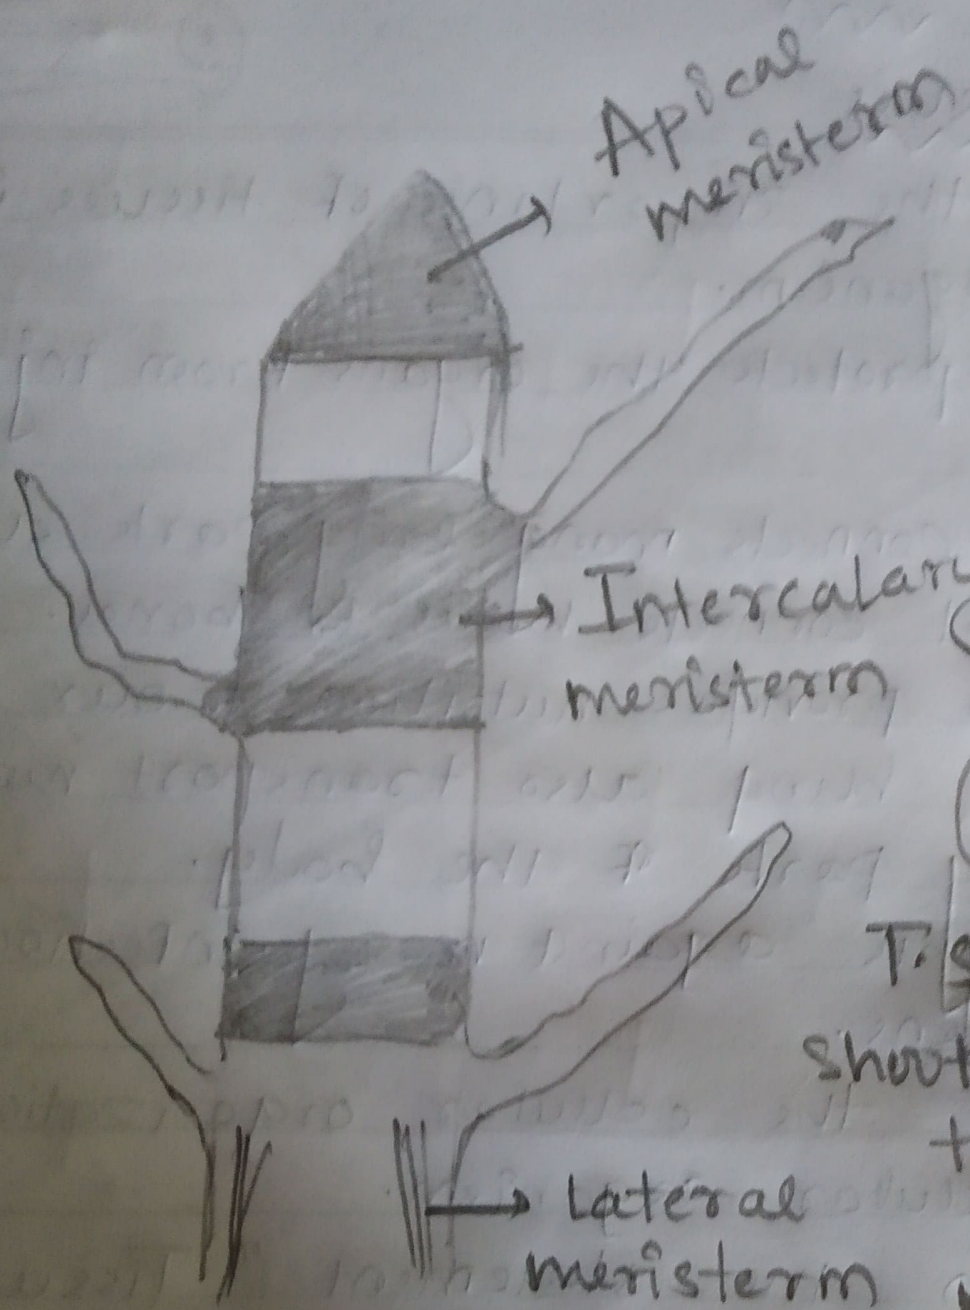

A group of cells that are similar in structure and/or work together to achieve a particular function forms a tissue.

② Why animal and plants have different types of tissues ?

Ans:
m

Animal and plants have different types of tissues because plants are stationary in nature. They don't show locomotion. They contain dead cells. Animal tissues are living tissues and show locomotion.

③ Draw a well labelled diagram of meristematic tissue.

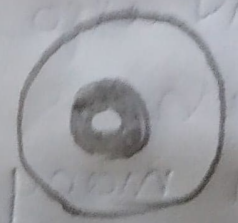

Apical meristem

Intercalary meristem

Lateral meristem

Meristem tissues

T.S of a shoot showing the lateral meristem only.
