Homework

① Why plant tissue differ From Animal tissue ?

Ans →
mm

Plant tissue differ from Animal tissue because Plant tissues ^{contains} ~~are~~ mainly dead cells as they are stationary in nature and don't need much energy. Animal tissue has living cells because they need more energy to move.

② Differentiate between two types of plant tissues ?

Meristematic tissue	Permanent tissue
* Meristematic tissue can divide throughout their life.	* Permanent tissues lost their ability of cell division after they completely grows
* In meristematic tissues the cells are always living cells.	* Permanent tissue can be non-living (Sclerenchyma) or living (parenchyma)

③ What are the four different types of animal tissues ?

Ans →
mm

- Epithelial tissues
- Connective tissues
- Muscular tissues
- Nervous tissues

Q) Why blood is known as special connective tissue?

Ans Because it is a fluid connective tissue containing matrix.
