### O Strich

The ostrich is a large flightless bird.

Ostriches have long legs & a long neck but they have a small head.

Their wings are very small so that is why they can't fly.

Ostriches now only live in Africa.

### Owl

The owl is a bird that they will sleep at day but they are active at night.

The owl can fly easily.

Their wings are right position according to their body.

The owl are found everywhere.
