Answer the following Questions.

1. Auto Number datatype generate Sequential number whenever record is added.
2. OLE object datatype is used to embed an object created in another application.
3. We can add images by using attachment fields.
4. Calculated Datatype is used when a user creates a table field that calculate values.
5. Access ~~look~~ Set lookup fields to the Number datatype.
6. The Mesh topology handles large no of traffic.
7. In Ring topology all the nodes in the network are connected in a circular manner.
8. In star topology the central server act as a hub.

9. In point-to-point topology two nodes are differently connected.
10. Network architecture is divided into 2 types.
11. Wi-Fi use radio signals.
12. A Network maintained without using wires is called Wireless.
13. LAN and MAN are the different types of networking.
14. Network topology refers to the layout in which various components of the network are connected and communicate with each other.
15. Network Security means protecting data and resources from any unauthorized access.
16. WAP is a device that connects wireless communication devices to from a

wireless network.

17. Criteria property contains the condition on the basis of which the records will be filtered in the query output.
18. A Query is a database object that helps you to retrieve and view information from one or more database tables.
19. A Query is a database object that helps you to retrieve information from one or more database tables.
20. In a query, the Criteria property is used to set the condition on the basis of which the records are filtered.
21. You can set multiple criteria in a query using OR property.
22. Form Sort property is used to filter the data either in a ~~descending~~ ascending or descending order.

23. **Form** allows you to add and update data in ~~specific~~ a table, one record at a time.
24. A **report** is an effective way to ~~organism~~ and summarize data in a printed form.
25. There are **2** types of operators in python.
26. The statement that governs the flow of a program are called **control statement**.
27. The **Datatype** of a variable is an attribute that tells what kind of data can a variable have.
28. ~~concatenation~~ Concatenation is **string** operator.
29. The **Sequential** construct executes the statements in a sequential manner.
30. **Interactive** mode of python giving the output instantly.
