### PLASTIC POLLUTION (By Rajdeep)

Now a days pollution is a matter of great problem in <sup>the</sup> world because of pandemic situation every ~~where~~ where. ~~Plas~~ Plastic is non-biodegradable waste. It is the most harmful pollutants because it takes many years to dissolve in soil. In the whole world, everyone uses a large amount of plastic like plastic bags, plastic cup, plastic spoons etc. When the use of plastic period is over people throw ~~them~~ it around their surrounding. Mainly plastic bags or polythines are throw like for garbage plastic bags are used and thrown. ~~But people~~

But peoples who throw plastic pollutants in road, lake, drain etc; they did not think about the nature. "What will happen if drains are jamed with plastic pollutants."

66

What will happen in future if the soil is destroyed by plastic pollutants? For these such kind of people the nature is getting damaged & in our day to day life. We should not use plastic bottles because plastic bottles are used for 1 or 2 years and they are throw. This is becoming very bad for our future. Lastly I want to say that plastic should be banned strictly.
