why is it important to save water?
Every person needs water survive.
By conserveing water, we can keep
water pure and clean and protect
the environoment.

It is important to save
water because:

- The uses are endless.

- Water grows food.

- It protects our wild life and
ecosystem

- less water use mean more saving

- water supply is already limited

- conserving water also saves
water energy

- only 20/0 of water of earth
is supply to us
