Page no. 110, Q-1 (inter question)

Q) What are the components of the transport system in human beings? What are the functions of these components?

A) The components of the transport system in human beings are →

~~*heart → the heart is responsible for pumping the oxygenated blood through-out the human body.~~

(i) Blood → It transports gases, nutrients, and metabolic wastes.

(ii) Lymph → It protects our body from illness-causing invaders, also helps in maintaining body fluids levels.
