

HW
21/12/21

Why do we fall ill?

1) Give function of antibiotic penicillin.

Ans → A bactericidal antibiotic, such as penicillin

kill the bacteria.

→ These drugs usually interfere with either

the formation of the bacterial cell wall

or its cell contents.

→ A bacteriostatic stops bacteria from multiplying.

2) What are disease specific means of prevention?

Ans → The disease-specific means of prevention are

the use of vaccines. The vaccines are used

against tetanus, diphtheria, whooping cough,

measles, polio and many others.

3) What are basic conditions of good health?

Ans) There are many conditions essential for good health which are:-

- Balanced diet.
- Exercise
- Social and economic well-being.
- Leading stress free life.
- Better surrounding or environment.

4) What are three limitations for the approach to deal with infectious diseases?

Ans) The three limitations are:-

- 1) If someone has a disease, their body function are damaged and may never recover completely.

→ It can be found out by observing the behavioural changes of the child such as:

→ Improper food intake.

→ Constant crying.

→ Mood changes.

5) write a short note on malaria as a disease, its symptoms and control.

Ans → Malaria is a life-threatening disease. It's typically transmitted through the bite of an infected Anopheles mosquito.

Infected mosquitoes carry the Plasmodium parasite. When this mosquito bites you, the parasite is released into your bloodstream.
