

HW

1) Define tissue.

A group of cells similar in structure and work together to achieve a particular function forms a tissue.

2) Why plants & animals have different types of tissues?

Plants consists of living as well as dead tissues. Animals contain living tissues in order to provide energy but movement. Also both animals & plants perform different function. So to suit their varied functions, they are made up of different kinds of tissues.

3) Draw a well labelled diagram of meristematic tissue.
