River

A river is a really beautiful water body.

It is mainly found in forests. Some

rivers also flow

into seas. The rivers

like Mahanadi in

Odisha is a really

big river. Rivers

have crocodiles in them

but they are still

a lot advantageous.
Fast flowing rivers
form electricity which
is really useful. It
supplies water in the
rural areas. It also
has some useful animals
like prawns and
fish which we eat.
It also contains
animals like the brown

water
cross
river

water snake, Gharials, crocodiles. etc. These rivers, are very vast and deep. These days people are polluting rivers a lot, so must do something to stop it.

The holy Ganga is one of the most polluted rivers in India.

Water is life.
