

## Homework

- 1- Differentiate between laboratory thermometer and clinical thermometer.
- 2- with the help of a well labeled diagram describe a clinical thermometer.
- 3- List the units of temperature.

## Answers

1- Ans- Laboratory thermometer is used to measure the temperature of objects and the clinical thermometer is used for measuring the temperature of an person or human.

Q-2- Yes this is a diagram and it will explain the clinical thermometer very well.

Q-3- There are 3 units of temperature:

- Kelvin : K
- Celsius/Centigrade : °C
- Degree Fahrenheit : °F
