

14-9-21

HW

- 1) why circulatory system is important.
- 2) Draw the diagram of heart and label the parts.
- 3) Differentiate between the three blood vessels.
- 4) write in a tabular form different components of blood.

Answer

1) The circulatory system is important because it helps in transport of ~~flang~~ nutrients and removal of waste, which is carried by blood.

3) three blood vessels are - Arteries, veins, capillaries.

Arteries → They carry blood away from the heart to different parts.

Veins → They carry blood towards the heart to different body parts.

Capillaries) these are the finest blood vessels which inter connect the artery and vein.

9 -> Components of Blood

1 ->

Plasma

2 ->

WBC's (white blood cells)

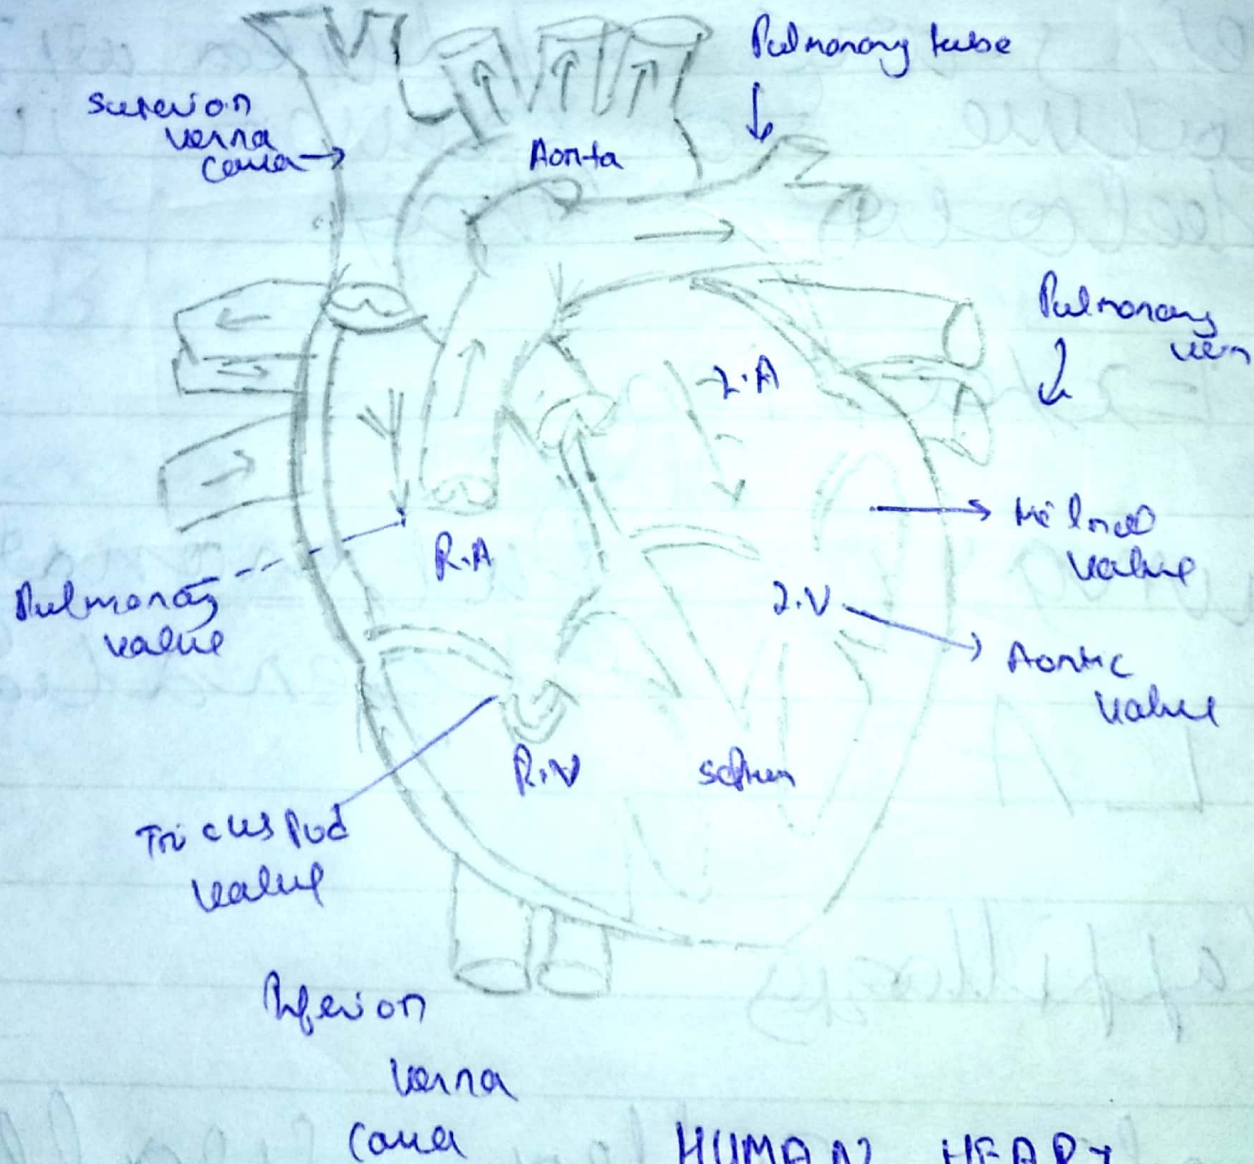

3 ->

RBC's (Red blood cells)

4 ->

Platelets

2)

HUMAN HEART
